

Fireplace Restoration

Do you have an outdated decorative fireplace that has surpassed its useful life, leaks cold air, or just needs to be upgraded? McDowell's, your fireplace expert, can replace your fireplace, improve the looks of your home, and lower energy cost with minimal disruption to your everyday routine.

Challenge
The customer wanted to eliminate cold drafts, improve the looks of the family room, convert to natural gas, and provide reliable heat at the touch of a button.

Solution
McDowell's recommended & installed a new Regency Direct Vent Gas Fireplace. We also insulated the exterior walls of the chase with paper backed insulation to keep drafts at bay. Blown insulation should never be used in Chimney Chases.

Project Progress
We extended the fireplace with framing for a more natural look and installed Durrock to support a new stone wall from floor to ceiling. McDowell's has a full time mason on staff.
